DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

1. Claims 1-13 and 15 rejected under 35 U.S.C. 102(e) as being anticipated by Chen 9US 6,81,278) as set forth in the previous Office Action dated 10/05/2004.

Response to Arguments

2. Applicant's arguments filed 01/05/2005 have been fully considered but they are not persuasive.

The applicant argued that Chen does not anticipate the claimed generating feature that recites, "...generating feature data corresponding to said scenes" and ".. wherein said feature data is described using descriptors each having its attributes defined as lower-level elements" in claim 1, page 8 of the remarks.

The examiner respectfully disagrees with the applicant. It is submitted that Chen suggests that there are a number of techniques that may be used to identify the background motion in a video segment. One technique, *called feature tracking, involves identifying features in the video frames* (e.g., using edge detection techniques) and tracking the motion of the features from one video frame to the next. Features that exhibit statistically aberrant motion relative to other features are considered to be dynamic objects and are temporarily disregarded. Motions that are shared by a large number of features (or by large features) are typically caused by changes in the disposition of the camera used to record the video and are considered to be background motions (col. 8, lines 44-67) Chen does anticipate generating feature data corresponding to said scenes.

Moreover, Chen suggests a text descriptor (TEXT DESCR) may also be included as part of the background frame data structure (called features in video frame as described above) (215, 216). In on embodiment, the text descriptor is a pointer to a text description (e.g., a character string) that describes the portion of the animation that is spanned by the background frame. The text description may be displayed as an overlay on the animation or elsewhere on the display

Art Unit: 2613

(e.g., a control bar) at the lower level (215 and 216 of fig. 15) so Chen clearly anticipates the feature data is described using descriptors each having its attributes defined as lower-level elements.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tung Vo whose telephone number is 571-272-7340. The examiner can normally be reached on Monday-Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Chris. Kelley can be reached on 571-272-7331. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
